

Upper Fountain Creek and Cheyenne Creek Flood Restoration Public Information Open House

The Fountain Creek Watershed Flood Control and Greenway District along with local partners has received funding from the Colorado Water Conservation Board to investigate restoration planning options for Upper Fountain Creek and Cheyenne Creek. Both creeks suffered from extensive flooding during the summer and fall of 2013. El Paso County, the City of Colorado Springs, the City of Manitou Springs and other regional municipalities and agencies have undertaken various projects to mitigate the risk and maintain the proper flow and water levels in Upper Fountain Creek, Cheyenne Creek and a number of tributaries. The 2013 floods resulted in the transport and deposition of considerable volumes of sediment and debris into the channels and along the floodplains of the creeks especially downstream of the Waldo Canyon Fire Burn Scar. This planning project has assessed existing conditions in Upper Fountain and Cheyenne Creeks and has evaluated the appropriate and necessary restoration measures and capital improvements to return the creeks to optimum conditions and mitigate further degradation and flood potential. We are here to update and inform the residents and local community about the progress that has been made and present the proposed plans and projects that are being evaluated for prioritization. More information is available on the District's website at <http://fountain-crk.org/>.

Please provide any comments or feedback regarding your opinions about proposed projects along Upper Fountain Creek or Cheyenne Creek.

Please continue on the back if necessary.
